

Step 1: Download the xampp according to your system and install it.  
Here is the link for installing on Windows OS.

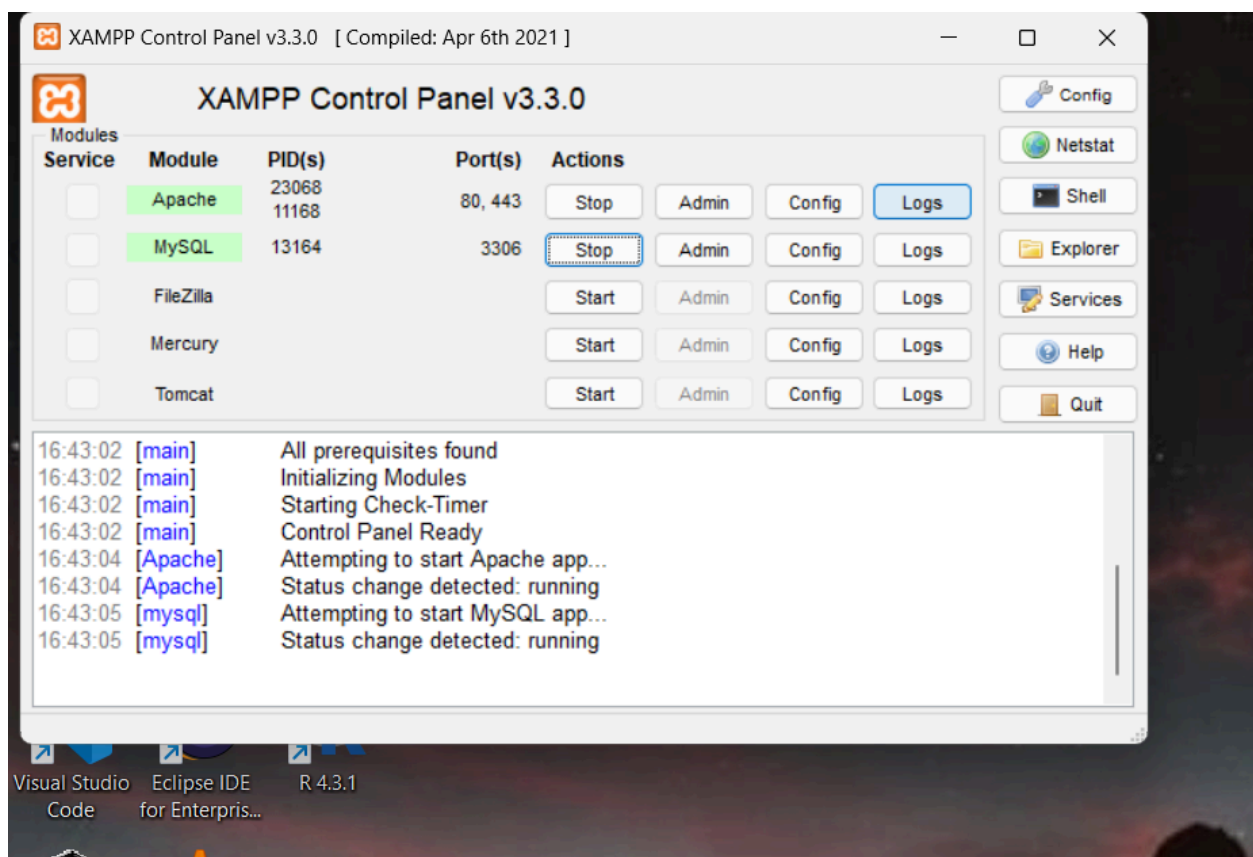

[https://youtu.be/6WEhuHD184w?si=o\\_dwmxqctX68XyDP](https://youtu.be/6WEhuHD184w?si=o_dwmxqctX68XyDP)

Step 2: Now Download the project file and unzip it.

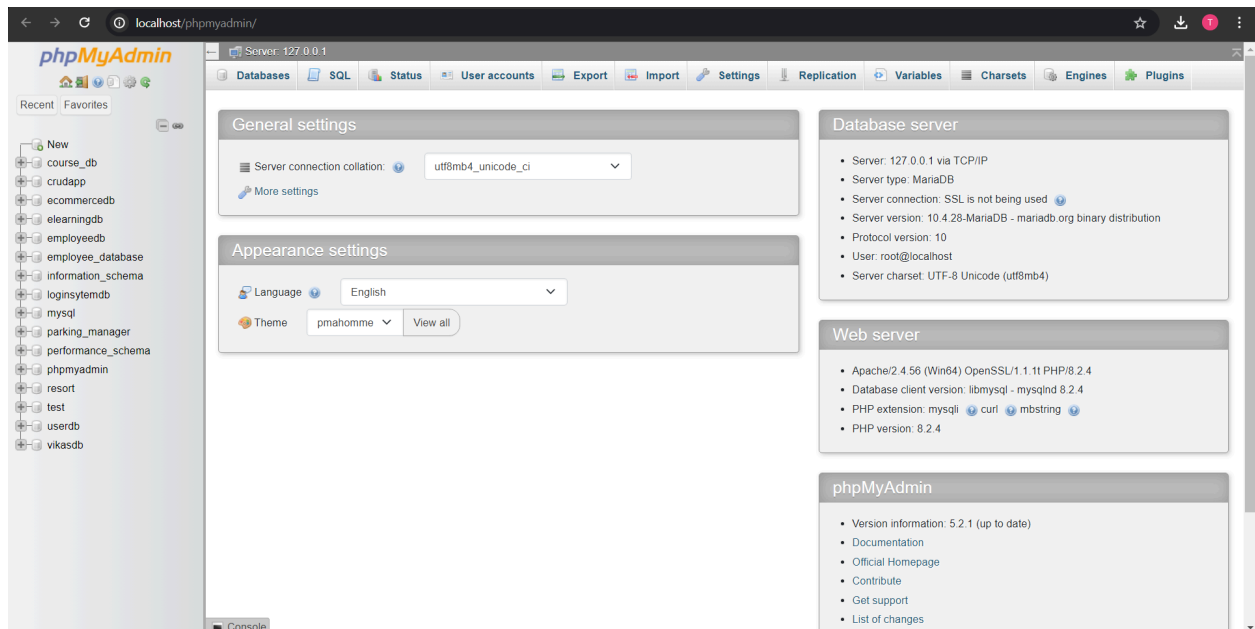

Step 3: Now Open File Explorer and navigate to C:\xampp\htdocs

Step 4 : Now Copy the entire project file and paste in htdocs

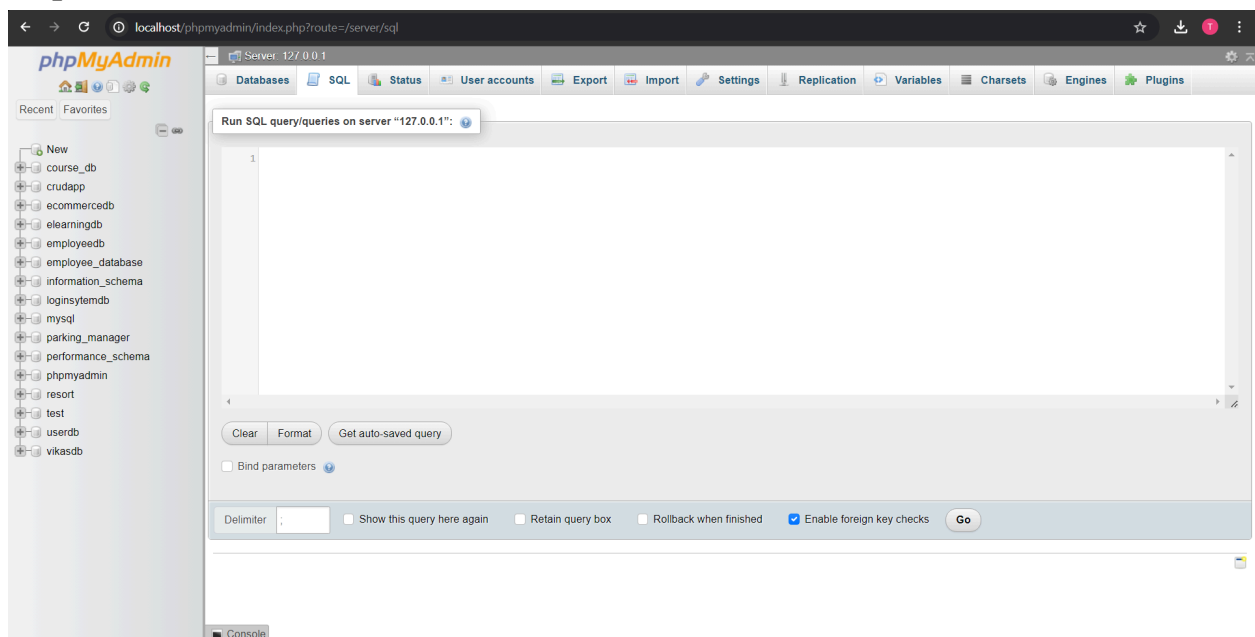

Step 5: open the XAMPP control panel. Start the Apache and MySQL modules by clicking on the “Start” button next to each module. This will start the Apache web server and the MySQL database server.Both Should be running.

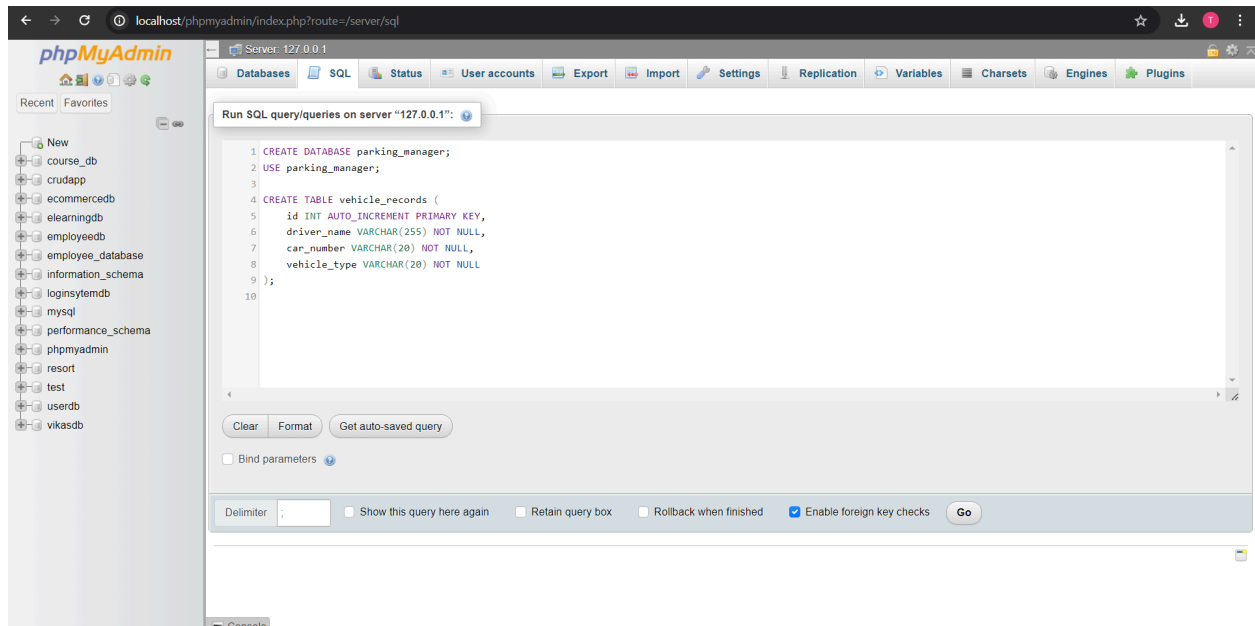

Step 6: Now Click on the Admin button for MySQL. Following page will open

Step 7: Now click on the SQL tab which is next to Databases in Navbar.

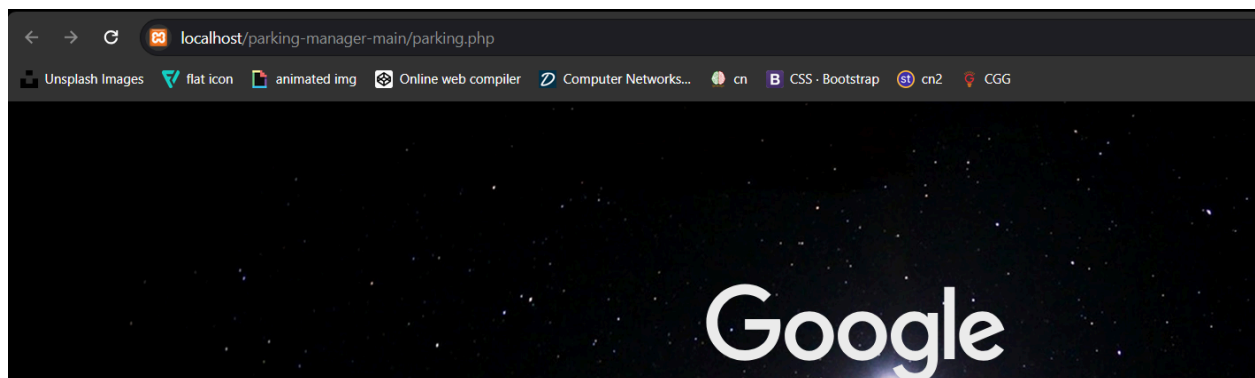

Step 8 : Now Open the table.txt file form the project and copy the content for the file and paste in the above window like the following.

After Pasting click on **GO** Button. This will create the database and table. You can see on the left sidebar

Step 9: Now Open the Browser and type the same

Now hit the enter and you will see the following
